

GENERAL INFORMATION ON THE MACHINE

Par	Description
1	General description of the machine

ICAF 160

ICAF 160-2

The ICAF trolley-mounted air cleaner is the ideal solution for suction and filtration of welding fumes and fumes from occasional manual thermal cutting and the adsorption of low concentrations of substances such as: gas, oil-free vapour, odour produced by various applications in the industrial and chemicals sectors. The high quantity, quality, and lifetime of the activated carbon sections and also wide filtration surfaces employed ensures operators high protection. Another important advantage is represented by the air treatment all around the working area in this way not only a limited work area is filtered, but creates an air change for the entire working ambient by decreasing the levels of present pollutants.
